Valuation of power station supports flotation

To support the privatisation and stock market flotation of a national power generator based in SE Asia fair values of the power stations and the distribution network were required.

The assets included coal fired power stations and coal mining plant and equipment.

The work

The assets were inspected and information from the fixed asset register and local engineers was used to clarify the asset base.

The valuation was undertaken on a depreciated replacement cost basis considering the assets' replacement cost new, depreciation profiles, remaining useful life, residual value and obsolescence.

The outcome

The valuation report was provided as part of the due diligence process to quantify and support asset value.
